

SAMUEL WEINBERGER

User Experience Research Engineer | AI-Driven Insights

(310) 529-7223 | samuelcweinberger@gmail.com | linkedin.com/in/samuelcweinberger | Portfolio

To the hiring team -

I've spent the past six years leading strategic research at the NFL, FanDuel, and Robinhood, where my work directly shaped product roadmaps — and the Senior User Researcher, Enterprise & Platform role sits exactly where my experience and interests meet. The problems this role owns are the ones I've built my career on: diagnosing where users abandon setup flows, researching trust and governance on regulated products, and proving value to stakeholders who need numbers.

I want to work at Glean because it sits where enterprise AI meets everyday work, and that's where research matters most right now. I'm also the kind of technical researcher this role calls for — I write my own Python and SQL pipelines, build custom telemetry to track behavior, and at Robinhood built AI agents that automate research end to end. I'd love to set up a short conversation to learn more and see whether it could be a good mutual fit.

Here is a link to my portfolio, which includes my resume, background, and case studies:
